

Business Requirements

Project title	Inventory management system with real time tracking
Project manager	Raj Singh Raghuwanshi
BRD status	In Review ▾

01 Executive summary

Provide a concise overview of the project, highlighting its purpose, objectives, and anticipated outcomes.

The goal of this project is to develop a web-based application that simplifies stock management. By automating inventory tracking, the system aims to reduce manual errors, save time, and provide real-time visibility into stock levels.

Business objectives	• Efficiency • Accuracy • proactive Management • Accountability
Success criteria	• The system successfully updates stock quantities automatically upon transaction. • The dashboard remains simple, clean, and easy to navigate for users of all levels. • The application runs reliably without frequent crashes

02 Project scope

Define the boundaries of the project, including what is and isn't included

Within scope

- Web-based application (React + Fast API + MySQL)
- User authentication and role management
- Inventory CRUD operation (Create, Read, Update, Delete)
- Request and approval system
- Real-time stock updates
- Basics dashboard with insights
- low stock alerts

Out of scope

- Mobile application (for now)
- Payment integration, Advanced AI analytics (future phase)
- barcode/QR scanner integration (future phase)
- Multi-language support
- Cloud deployment (optionnal, not mandetory)

03 Business requirements

List the high-level business requirements for the project.

1. The system must provide a centralised platform to manage all inventory data.
2. It should allow real-time tracking of stock levels.
3. The system must support multiple users with different roles (Admin, User).
4. It should reduce manual work and human error.
5. The system must provide alerts for low stock items.
6. It should maintain a record of all transactions (add, update, delete).
7. The system must support a request and approval workflow.
8. it should allow easy search and filtering of items

05 Functional requirements

Detail the specific functions the system must perform.

High ▾

Requirement ID	Description	Priority
FR001	User management	High ▾
FR002	Inventory management	High ▾
FR003	Request management	High ▾
FR004	Dashboard	Medium ▾
FR005	Alert system	Medium ▾
FR006	Search and Filter	Low ▾

06 Non-functional requirements

Specify the quality attributes and constraints of the system:

Performance	• The system should respond within 203 seconds • Should handle multiple users at the same time
Security	• User authentication required • Password must be stored securely (Hashed)) • Role-based access control
Scalability	• System should support future expansion (AI, mobile app)
Usability	• Simple and clean UI • Easy navigation for beginners
